## MONTHLY SUMMARY FOR JANUARY 1996

Despite a major outbreak of cold air at mid-month, much of Oklahoma enjoyed above normal temperatures in January while suffering from below normal precipitation. The situation was reversed in southeastern Oklahoma where an early month snowstorm and significant rains in the middle of the month produced above average precipitation and lower than average temperatures. The statewide average temperature of 36.1 degrees was .1 degree less than normal. The northwestern two-thirds of the state returned to the dry-pattern that had been predominant since early autumn, but had been interrupted in December. Many areas of west central Oklahoma went without measurable precipitation for the month, and those that did receive any saw it fall as wind-driven snow that rapidly blew off the moisture-hungry pastures and wheat fields. The statewide-averaged precipitation of 0.91 inches was 0.35 inches less than normal. Total precipitation from the first of October through the end of January averaged 4.42 inches across the state, about half of the normal for the period, marking the 10th driest October-to-January period in the state since 1892-93.

A snowstorm swept through southern and eastern Oklahoma on New Year's night leaving a trail of snow in its wake from the Arbuckle mountains in Murray County to the Boston Mountains in eastern Adair County. The largest reported snowfall amounts were 9 inches at McCurtain (Haskell) and 8 inches at Lyons (Adair) and Kansas (Delaware). Smithville (McCurtain) reported 2.20 inches of precipitation, with rain turning to snow as the storm progressed. Pine Creek Dam (McCurtain), Bear Mountain Tower (McCurtain) and McAlester (Pittsburg) each reported more than 1.50 inches of total precipitation from the storm. Cold air poured into northwestern Oklahoma and spread across the state during the first week of the month. Many areas reported low temperatures near zero on the 6th, 7th and 8th. The temperature at Freedom (Woods) dropped to -2 degrees on the morning of the 7th.

A statewide warm-up during the second week that culminated with 78 degree temperatures reported on the afternoon of the 13th at Mangum (Greer) and Boswell (Choctaw) ended abruptly on the 17th when a major blast of Arctic air moved through the state. Thunderstorms in advance of the cold front produced over two inches of rain at a number of locations. Calvin (Hughes) reported nearly 3 inches and Lyons and Jay Tower (Delaware) each reported more than 2.50 inches of rain. Large hail was reported at many locations, including Tecumseh (Pottawatomie) and Duncan (Stephens). The frontal passage was followed by blowing snow in the west with little or no accumulation and as much as 3 inches of snow in the northeast. North to northwest winds buffeted the western two-thirds of the state on the 18th as temperatures plunged. The Oklahoma Mesonet sites at Medford (Grant) and Weatherford (Custer) each reported winds that averaged nearly 30 miles per hour over a full 24-hour period. Gusts in the 60s were reported at several sites, led by a reported gust of 68 miles per hour near Medicine Park (Comanche). Below-zero temperatures were reported at several locations on the morning of the 19th, including -4 degrees at Bartlesville (Washington), Barnsdall (Osage) and Freedom (Woods).

Temperatures rallied somewhat in the week following the Arctic blast, reaching into the mid-70s in southwestern Oklahoma on the afternoon of the 22nd. Yet another blast of cold air late in the month drove overnight temperatures in the Panhandle to sub-zero readings. Gate (Beaver) reported the lowest temperature of the month, -8 degrees, on the morning of the 30th.

Howard L. Johnson

March Normal Daily Maximum Temperatures (°F)

March Normal Daily Minimum Temperatures (°F)

**March Normal Monthly Precipitation (inches)**

**SEASONAL NATIONAL WEATHER SERVICE OUTLOOK**

**(March through May 1996)**

**Precipitation - Near Normal Statewide**

**Temperature - Near Normal Statewide**

OKLAHOMA CITY CLIMATE CALENDAR

March 1996

The data on this calendar are for Oklahoma City.  
 Normal values are calculated for the period  
 1961-1990. Extremes are found for the period  
 of record (1891 - present).

Normal	Actual	Normal	Actual	Normal	Actual	Normal	Actual	Normal	Actual	Normal	Actual	Normal	Actual	Normal	Actual
