MONTHLY SUMMARY FOR OCTOBER 1996

Pleasant autumn weather dominated Oklahoma during most of October. Both temperature and precipitation were lower than normal across the state. An early-season snow in the Panhandle and locally heavy rains in the south late in the month provided variety and raised the total monthly statewide precipitation. October precipitation, averaged across the state, was 2.60 inches, 0.47 inch less than normal. The statewide-averaged temperature of 61.2 degrees was 0.9 degree lower than normal. This October ranks as the 52nd driest and 32nd coolest since 1892. Year-to-date precipitation stands at 31.47 inches, 1.32 inches greater than normal, to rank as the 38th greatest January through October precipitation in state history. Temperatures thus far in 1996 have averaged 62.8 degrees, 0.7 degree lower than normal to rank this year, so far, as the state's 27th coolest.

A cold front moved through the state on the 2nd, knocking over 30 degrees off of the daily high temperatures in the Panhandle from the first to the second. Hooker, Guymon and Goodwell in Texas County and Boise City in Cimarron County each had highs in the low 90s on the first and in the upper 50s on the second. Otherwise, daytime temperatures were generally in the 70s and 80s through the first three weeks, although there were a few excursions into the lower 90s in the Panhandle and into the upper 60s at diverse locations.

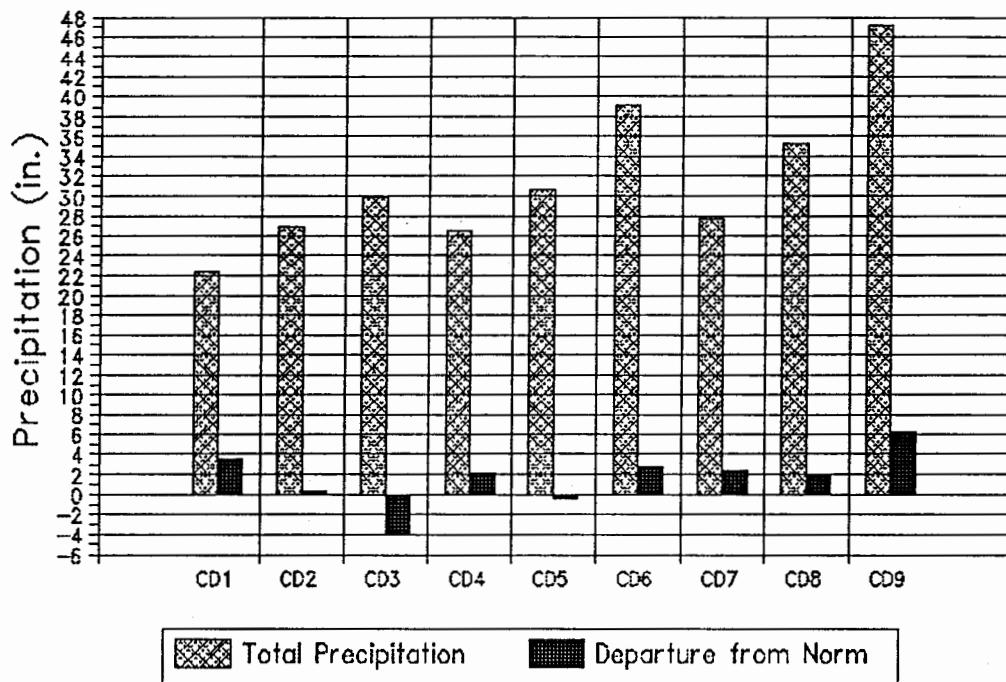

Significantly cooler air moved through the state on the 17th, bringing freezing temperatures to the Panhandle on the 17th and into many other areas of the state on the 19th. A rapidly developing low pressure system brought severe weather to the state on the 20th and 21st along with an early taste of winter weather in the northwest. Baseball-sized hail fell in Stephens County on the 20th with smaller hail reported in many areas. Winds were estimated to have reached 100 miles per hour in Garvin and Murray counties in south central Oklahoma. Local flooding was reported south of Duncan (Stephens) on the 20th and in Antlers (Pushmataha) and south of Caney (Atoka) on the 21st. Five to eight inches of snow fell in western Cimarron County in the Panhandle with flurries reported as far east as Kansas (Delaware). Heavy rains from the 20th through the 22nd in south central and southeastern Oklahoma produced 7.58 inches of precipitation at Antlers, 6.88 inches at McGee Creek Dam (Atoka), 6.65 inches at Lane (Atoka) and 6.51 inches at Bokchito (Bryan). The Antlers precipitation included 5.80 inches on the 21st. Cloudy, also in Pushmataha County, received 4.64 inches on the 21st. The cold air that entered the state in the wake of the storm lowered temperatures significantly. The Mesonet site near Kenton (Cimarron) recorded a low temperature of 16 degrees on the 22nd, and temperatures in the 20s and low 30s were reported from many areas in the state.

Warmer weather returned to the state by the 23rd and mild, relatively wet weather dominated the remainder of the month. Locally heavy rain on the 26th and 27th brought daily reports of 3.69 inches of rain to Claremore (Rogers) and 3.40 inches to Smithville (McCurtain). Additional reports included 3.16 inches at Vinita (Craig), 3.11 inches at Miami (Ottawa) and 3.06 inches at Boswell (Choctaw). Chelsea (Mayes) reported 3.00 inches of rain on the 27th, 1.66 inches on the 28th and another 1.86 inches on the 29th.

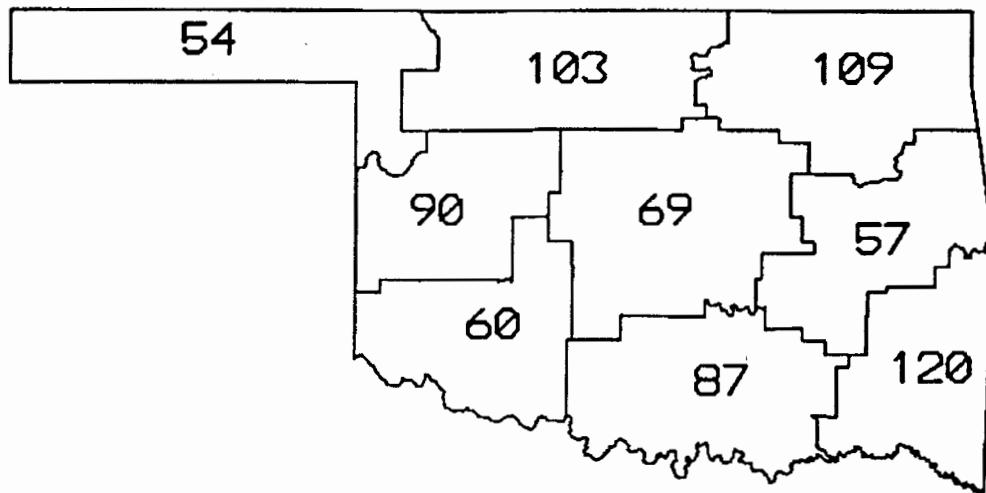

Another winter-like system spread cold, wet weather across the state on Halloween evening. Quinton (Pittsburg) received 2.38 inches of rain and Sallisaw (Sequoyah) reported 2.12 inches while daily high temperatures in most of western Oklahoma were in the 40s or upper 30s.
